Cartoon Network's Adult Swim has entered the world of iPhone and iPod Touch gaming with one of their most popular web games, Amateur Surgeon. This game is a gruesome surgery game with many similarities to Trauma Center for the Nintendo DS and Wii.

Your role in this game is to save the unlucky patients who've decided to come to you for medical treatment. Armed with whatever random tools you could find and a former surgeon guiding you through your procedure. The game offers you 27 standard levels for you to practice your skills on and three hidden surgeries that you'll need prove your worth before they become unlocked.

Each patient will bring a whole series of medical issues to the table that you'll have to handle in order to advance to the next patient. You won't be solving just one issue that these people have, you'll be dealing with multiple complications ranging from the simple to the bizarre. You'll be graded on your performance, so make sure not to screw up or you'll wind up either killing the patient or receiving a very low grade.

This game is exactly like the web version if you've played that before, so throwing a price on the iPhone and iPod Touch version may turn some people away. It's definitely an enjoyable game, but the fact that you're playing it on a small screen might cause some issues considering that some of the problems you have to fix are small and easy to overlook. If you enjoy Trauma Center or have played this game before and liked it, then definitely download it for your device. It's a solid game that will keep you entertained for quite some time considering all the replay value it has to offer.
